Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: The invention relates to the field of telecommunications and more particularly to a method and corresponding network element for path protection in a transmission network.

The prior art of record in combination or alone fails to teach or suggest the following elements of independent claims 1, 12, 13 and 14 in combination with other elements. For example independent claim 1 has claim limitations such as providing at least one protected path segment between a first network element and a second network element, providing at least one protection path segment between the first and second network elements, creating a tandem connection along the protected path segment between the first and second network elements, detecting a failure on the protected path by means of a tandem connection monitoring in the second network element, and upon detection of the failure, inserting a tandem connection defect indication into a reverse traffic signal, bridging the reverse traffic signal to the protection path segment, and selecting the protection path segment to receive a traffic signal from the first network element, wherein the defect indication being transmitted on the protected path segment at least as long as the failure persists. Independent claim 12 has claim limitations such as detecting a failure on the protected path segment, and bridging a traffic signal to be transmitted over the failed protected path segment to the protection path segment, wherein the method is characterized by the use of a tandem connection monitoring function to detect the failure and a tandem connection defect indication to communicate the occurrence of the failure from the second to the first

network element and initiating the bridging step, wherein the bridging step is performed by the first network element in accordance with the defect indication that is transmitted from the second network element to the first network element, and wherein if the failure is cleared, a bridge from the protected path segment to the protection path segment provided by the bridging step is removed. Independent claim 13 has claim limitations such as receive and transmit traffic signal on at least one protected path segment to a far end network element, receive and transmit traffic signals on at least one protection path segment to the same far end network element, create a tandem connection along the protected path segment, detect a failure on the protected path segment by means of a tandem connection monitoring function, and upon detection of a failure to insert a tandem connection defect indication into a reverse traffic signal to bridge the reverse traffic signal to the protection path segment, and to select the protection path segment to receive a traffic signal from the first network element, the defect indication being transmitted on the protected path segment as long as the failure persists. Independent claim 14 has claim limitations such as provide at least one protected path segment between the first network element and a second network element that use a tandem monitoring function to detect failure on the protected path, provide at least one protection path segment between the first and second network elements, and upon occurrence of the failure on the protected path detected and communicated by the second network element, provide the protection path as a new working path between the first and second network elements, wherein the provision of the new working path is performed such that the first network element bridges a traffic signal to be transmitted

over the failed protected path segment to the protection path segment in accordance with a defect indication transmitted from the second network elements to the first network element, and wherein if the failure is cleared, a bridge from the protected path segment to the protection path segment provided is removed. For the above reasons independent claims 1, 12-14 and their dependent claims 2-11, 15-16 are allowable.

2. Claims 1-16 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
